

Sravanthi Jaliparthi

+91 8179783145 · jaliparthisravanthi553@gmail.com · [LinkedIn](#) · [GitHub](#) · [LeetCode](#) · Vijayawada, India

SKILLS SUMMARY

Languages: Python, Java, C (Basic), JavaScript, SQL

Web & Frameworks: Flask, HTML/CSS, MySQL

ML & Data: NumPy, Pandas, scikit-learn, Machine Learning Fundamentals, Data Structures & Algorithms

Tools & Platforms: Git/GitHub, VS Code, Anaconda, Jupyter Notebook

Soft Skills: Problem-Solving, Scalable System Design thinking, Team Collaboration, Adaptability

EDUCATION

B.Tech — Artificial Intelligence & Machine Learning

2024 – 2028

Kalasalingam Academy of Research and Education | GPA: 9.03 / 10.0 | Penultimate Year (2026)

Board of Intermediate Education — Narayana Junior College | 975 / 1000 2022 – 2024

WORK EXPERIENCE

Google Student Ambassador | Google

July 23, 2026 – Present

- Serving as a campus representative for Google, promoting developer programs, tools, and events, and driving student engagement with Google's technology ecosystem.
- Organized and supported outreach initiatives to build awareness of Google developer resources within the student community, strengthening peer-to-peer technical learning.

AI Developer Intern | Edulenza

May 2026 – August 2026 (Completed)

- Architected AI-powered educational content templates in Python, producing structured, reusable lesson formats that scale across the production platform — reducing manual content setup time significantly.
- Built and integrated ML-driven features in a concurrent, multi-user production environment; collaborated on end-to-end delivery cycles applying software design best practices for reliability and maintainability.

AI Web Developer Intern | InAmigos Foundation

May 17 – June 6, 2026

- Designed and deployed a web application using HTML, CSS, and JavaScript within a 10-day sprint, implementing scalable request-handling and reliable session management across multiple concurrent users.
- Developed AI-powered web features end-to-end — from system design through testing and deployment — demonstrating ability to own and ship features independently in a fast-paced environment.

PROJECTS

HerMarket — Women Entrepreneur E-Commerce Platform | Python, Flask, MySQL, HTML, CSS, JavaScript

- Built a production-grade full-stack e-commerce platform end-to-end with 20+ implemented features across a distributed multi-role system — dual dashboards (Seller & Customer), role-based authentication, multi-stage order lifecycle, real-time inventory management with stock reduction and out-of-stock protection, and persistent distributed session management via MySQL.
- Engineered complete subsystems independently: Reviews & Ratings with duplicate prevention and average rating computation; Cart, Wishlist, Checkout & Address Management; Seller Analytics, Order Status Updates, Category Filters, Product Search, and Payment Method Display — delivering a scalable, concurrent multi-user shopping experience.
- Applied modular system architecture (separation of concerns, role-based access control) across the entire stack — demonstrating software design principles, data modelling, reliability engineering, and performance-conscious full-stack development beyond the hackathon scope.

CampusGuard — Smart Campus Complaint Management System | Python, Flask, MySQL, HTML, CSS, JavaScript

- Built a full-stack complaint management system with separate student and admin dashboards for complaint submission, real-time status tracking, duplicate detection, and follow-up management — demonstrating end-to-end system design with role-based access control.
- Implemented concurrent multi-user support with reliable session handling, modular backend architecture using Flask and MySQL, and a responsive frontend — applying software design principles across the entire stack.

ACHIEVEMENTS & ACTIVITIES

- 1st Prize — Algorithmist'26 Round 2 (GeeksforGeeks Campus Body, KARE) — top finish in competitive programming contest testing algorithmic problem-solving and optimization under time constraints.
- National-level hackathon participant — HERA HACKXX'26 at Sathyabama Institute; designed and shipped HerMarket end-to-end under pressure, demonstrating real-world engineering execution.
- Participant — CHRONOVERSE'26 & VINTRA 2025 Hackathons (KARE ACM-W / KARE) — collaborated cross-functionally on time-critical engineering challenges, applying rapid prototyping and systems thinking.
- 150+ LeetCode problems solved (arrays, linked list, recursion, strings, sorting & searching) — consistent practice streak demonstrating strong CS fundamentals and algorithmic depth.

CERTIFICATIONS

- Python Programming — Code Tantra
- Java (Basic) — HackerRank
- Introduction to Generative AI — Simplilearn
